SKILLS

Languages
Python, JavaScript, Java, C++, Assembly, SQL, Bash

Web & Backend
React, Node.js, FastAPI, REST APIs, HTML5/CSS3

Databases
PostgreSQL, MySQL

Tools & DevOps
Linux, Docker, Git/GitHub, CI/CD (GitHub Actions)

Security
Network Security, Threat Modeling, Nmap, Wireshark, Kali Linux, Phishing Simulation

Also
Machine Learning (applied); Apache Spark & Azure (coursework)

LANGUAGES

Greek (Native)
English (B2 – professional working proficiency)

CERTIFICATIONS

IPICS 2026
University of the Aegean · 89 Hours · 4 ECTS

Cybercrime & Cybersecurity
National and Kapodistrian University of Athens · 70 Hours

Data Security – Cybersecurity
University of Patras · 200 Hours

PROFILE

Software developer with around three years of hands-on coding experience across university and personal projects, and a recent Software Engineer internship. I build full-stack applications with React, Node.js and Python/FastAPI, and systems-level software in C++17 and Java, always backed by automated tests and CI. My projects include an endpoint-security prototype (C++/Java), a full-stack phishing simulation platform and an AI-powered trading system. A strong cybersecurity background, now deepened through an online MSc at the University of Piraeus, helps me write secure, reliable code. Based in Mytilene and seeking remote software development roles.

EXPERIENCE

PRIVACT P.C.
JUL 2026 – SEP 2026

Software Engineer Intern

- Contributed to software development tasks using Python in a professional development environment.
- Worked with existing code, supporting development, testing and problem-solving activities.
- Gained hands-on experience with professional software development workflows and team collaboration.

HELLENIC DUTY FREE SHOPS
JUN 2024 – SEP 2024

Customer Service / Sales Assistant

- Provided customer service in a high-traffic retail environment.
- Collaborated with team members to achieve daily operational and sales objectives.
- Followed company procedures, security requirements and service standards.

PROJECTS

SENTINEL AV
JUL 2026 – PRESENT

Windows Endpoint-Security Prototype (C++17 / Java) · github.com/ArgirisViv/sentinel-antivirus

- Built a native C++17 scanning engine for Windows: SHA-256 matching (Windows CNG) against a strictly parsed signature database, built-in EICAR test-file detection, and an explainable rule-based risk score (entropy, PE header analysis, extension heuristics) kept separate from exact detections.
- Implemented best-effort folder and process monitoring (process-tree reporting, ransomware-style activity alerts) and opt-in quarantine with restricted ACLs and hash-verified restore.
- Developed a JavaFX desktop console that supervises the engine as a child process, with structured JSONL logging and no network listener.
- Verified with automated C++ and Java tests, Windows CI and a release workflow on GitHub Actions, and Docker cross-compilation; documented architecture and a threat model with explicit limitations.

DARK SIGNAL
FEB 2026 – SEP 2026

Cybersecurity Awareness & Phishing Simulation Platform

- Designed and developed a full-stack phishing simulation and cybersecurity awareness platform using Python, FastAPI, React, PostgreSQL and Docker.
- Implemented controlled phishing campaigns, recipient targeting, simulated interaction tracking, risk assessment and security awareness analytics.
- Developed adaptive training workflows based on user behavior and risk levels, with role-based access control and security-focused functionality.

AI-POWERED PAPER TRADING PLATFORM
JUL 2025 – APR 2026

Automated Trading System for Stocks & Cryptocurrencies

- Built an end-to-end paper trading platform in Python with a web-based dashboard for stocks and crypto, combining technical indicators, market-regime analysis, ML-based components and a dedicated risk-management layer.
- Integrated external market-data and broker APIs, with an interactive dashboard for monitoring portfolio state, positions, execution activity and system health.
- Implemented backtesting and parameter-research workflows, plus execution safety mechanisms, validation and runtime guardrails.
- Built an automated test suite covering trading logic, execution safety, data validation, Docker health and web application functionality; Dockerized architecture with dedicated dashboard and trading services.

EDUCATION

University of Piraeus
OCT 2026 – PRESENT

MSc in Cybersecurity (Remote)

University of the Aegean
SEP 2022 – 2026

BSc in Cultural Technology and Communication (Informatics direction) — studies completed, degree conferral pending
